Legacy Slideshow Options

Slideshow Troubleshooting · https://www.metaslider.com/docs/legacy-slideshow-options/

In previous versions of MetaSlider, there are several slideshow libraries available. These included FlexSlider, Responsive Slides, Nivo Slider, and Coin Slider.

In MetaSlider 3.60 (released in 2023) we disabled three of those options by default. **We now focus all our development efforts on Flexslider**.

When you first install MetaSlider, you will no longer see the option to choose Responsive Slides, Nivo Slider, and Coin Slider. Those libraries are now marked as “Legacy”. There are some things to note here:

- We are not planning to remove those legacy libraries, but new features will be Flexslider-only.
- Existing users will still see the four library options. You can change this using the “Disable Legacy Libraries” setting.
- If you are having problems with any of the Legacy libraries, we recommend changing to Flexslider.

Disable Legacy Libraries (Beta)

This setting allows you to disable the legacy slideshow libraries: Nivo Slider, Coin Slider, and Responsive Slides

You can safely enable this setting. None of your slideshows use the legacy libraries.
