Dots Navigation in MetaSlider

Slideshow: Slide Navigation · https://www.metaslider.com/docs/dots-navigation/

MetaSlider offers several different ways for visitors to navigate to different slides. One of those options is to show dots. The dots are clickable and serve as a navigation tool.

How to use Dots Navigation

You can enable or disable the dots navigation using the "Dots" option in the screenshot below. You can choose to always show the navigation ("Dots") or only show the navigation when the user hovers over the slideshow ("Dots - Visible on Hover").

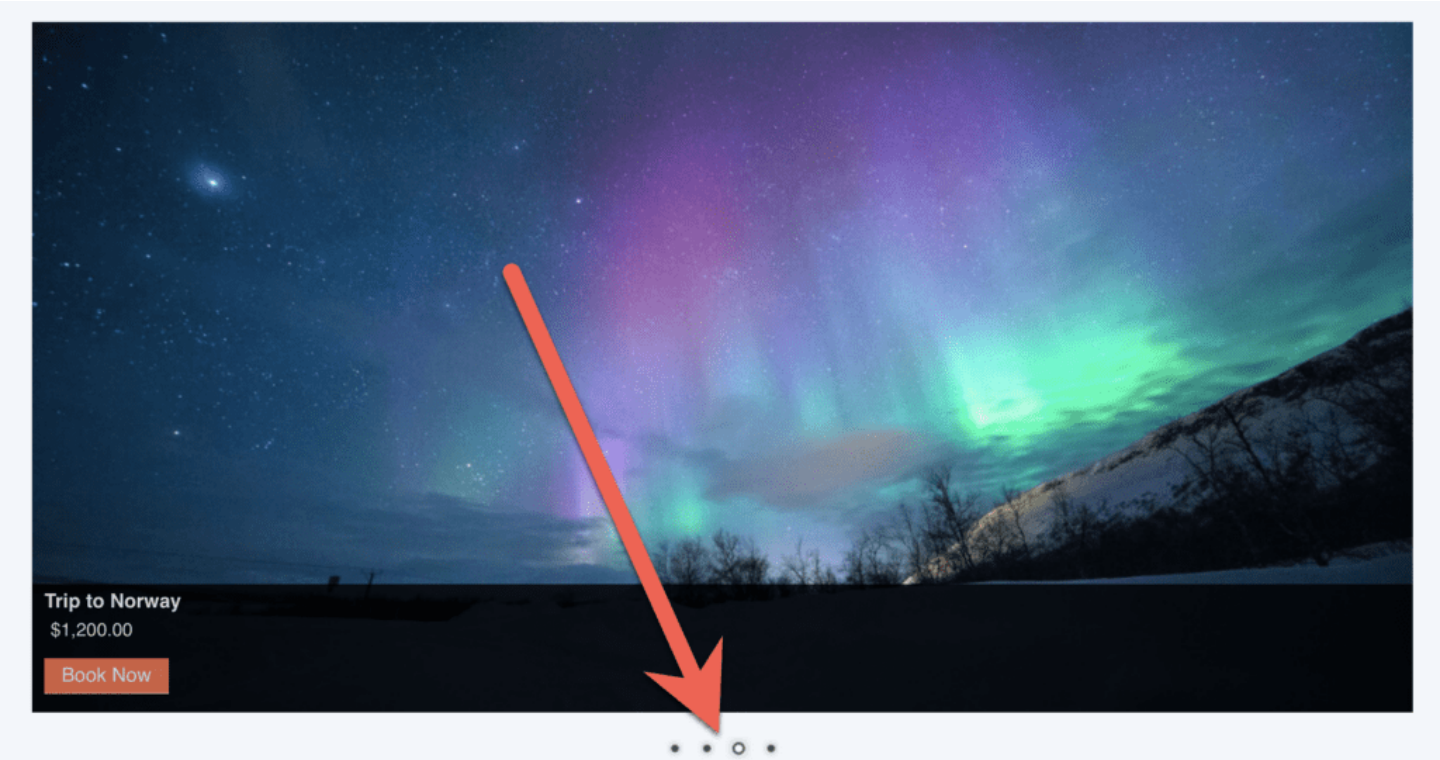

The style of the dots is controlled by the slideshow theme. Click here for details on all the themes in MetaSlider.

If you're using MetaSlider Pro, you can also create your own themes with your own style of dots.

Examples of Dots Navigation

In this screenshot below, you can see the dots. If you click any of these dots, you will be taken to the appropriate slide. Click here to see this slideshow. This design uses the "Databold" theme.

In this screenshot below, you can see the dots on the right side. Click here to see this slideshow. This design uses the "Jenga" theme.
