Introduction to the MetaSlider Theme Editor

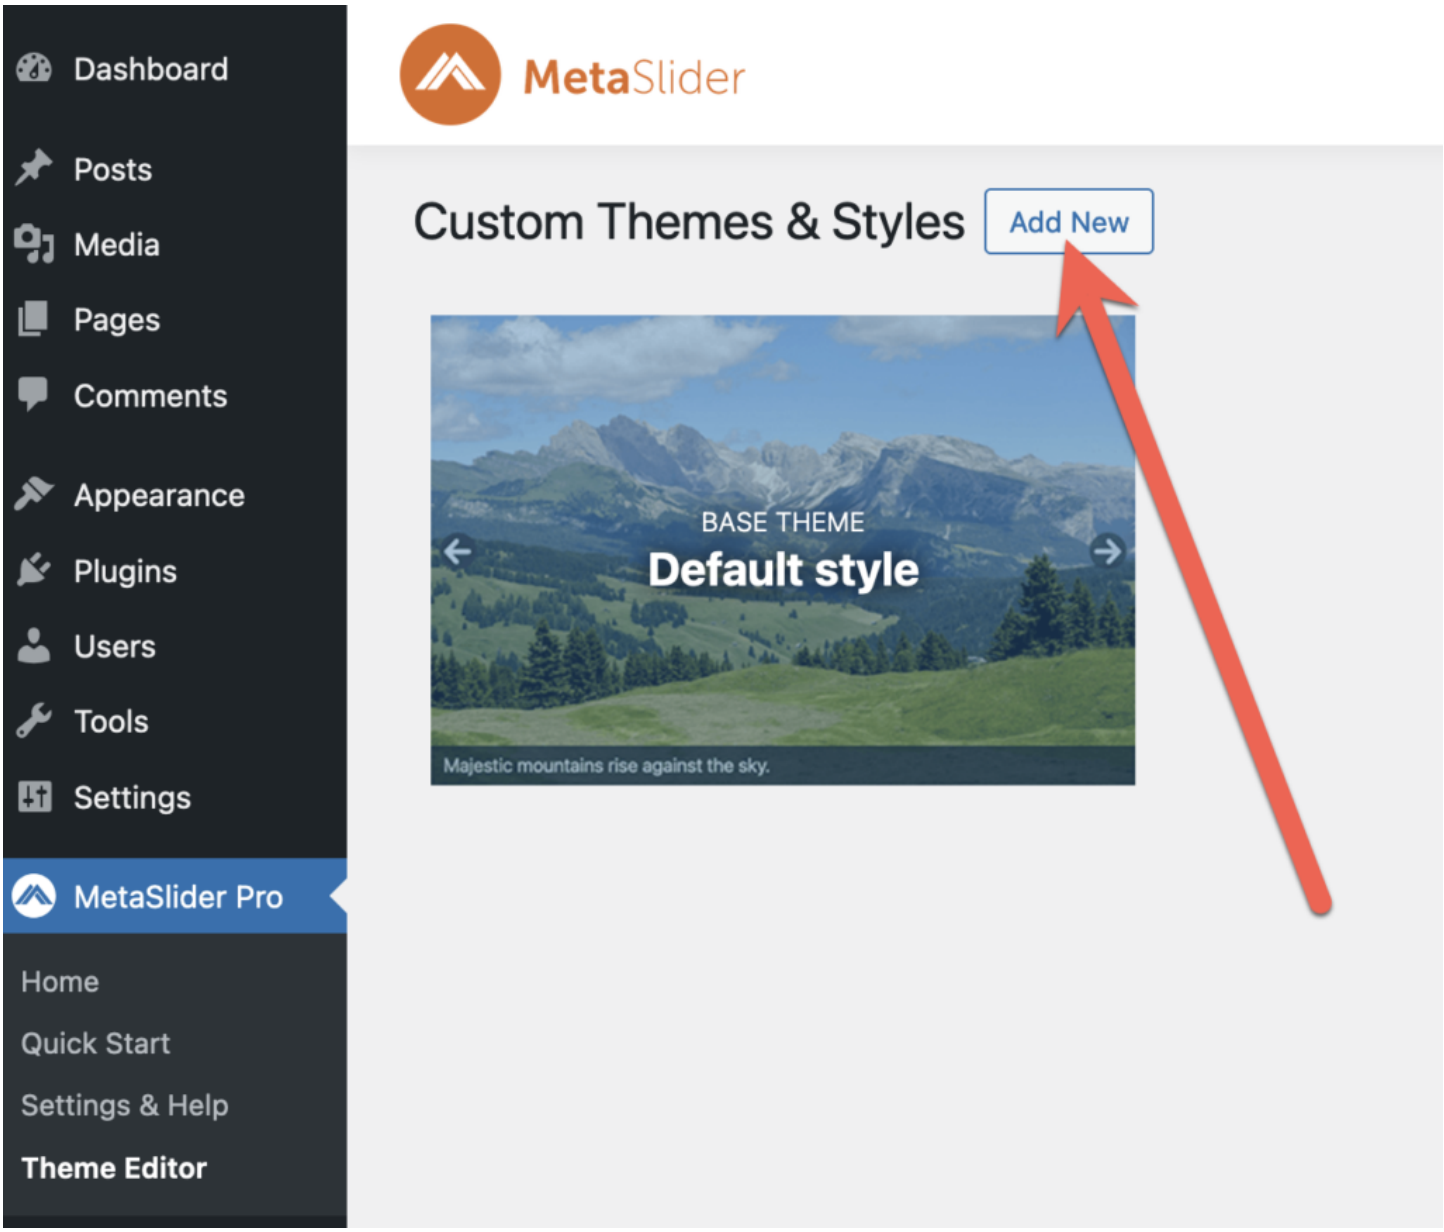

Slideshow: Theme Editor · https://www.metaslider.com/docs/theme-editor-introduction/

This feature requires the MetaSlider Slideshow Pro plugin.

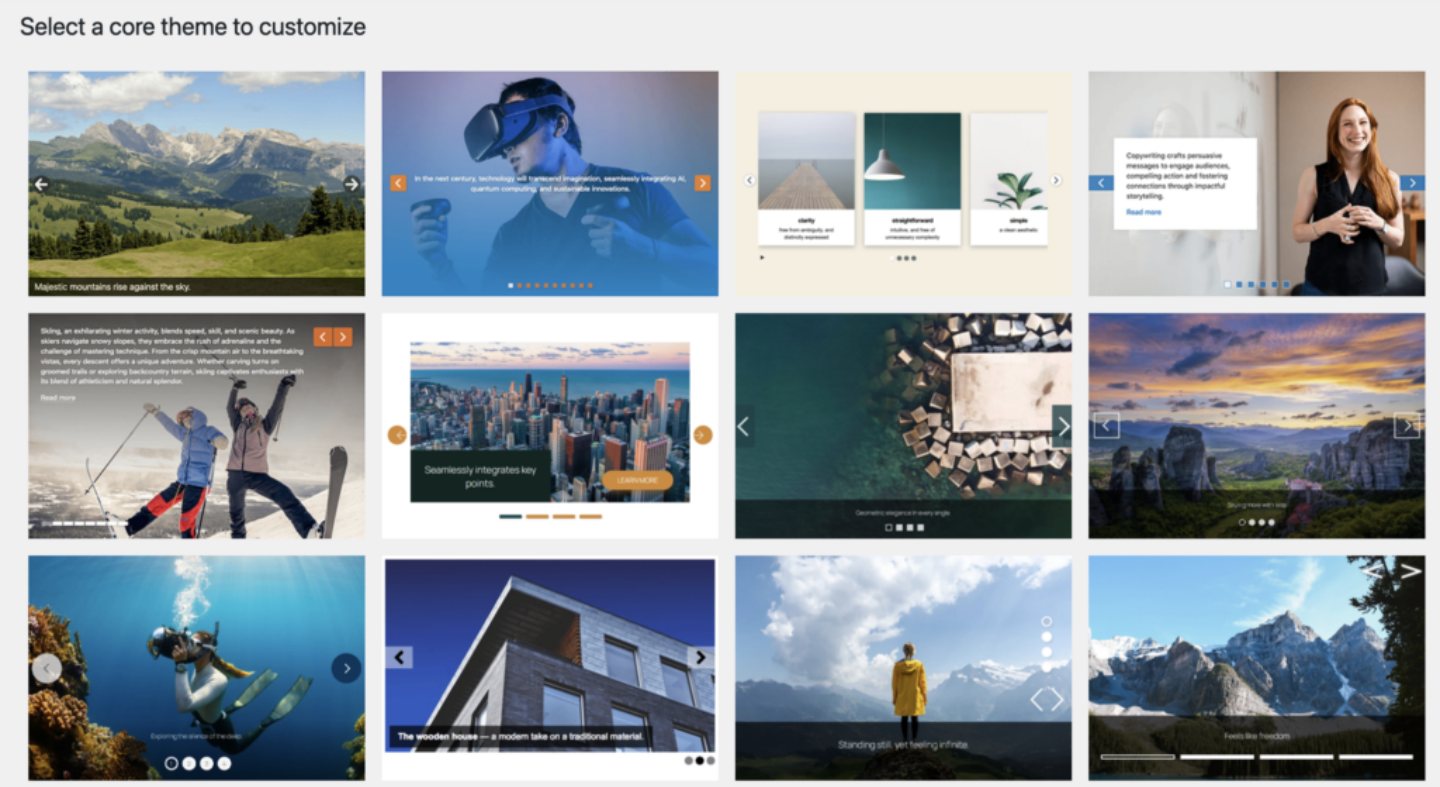

The MetaSlider Pro Theme Editor allows you to customize almost every aspect of your slideshow themes. You can change the arrows, navigation, captions, Play / Pause button, and other slideshow details.

Here's a guide to using the Theme Editor.

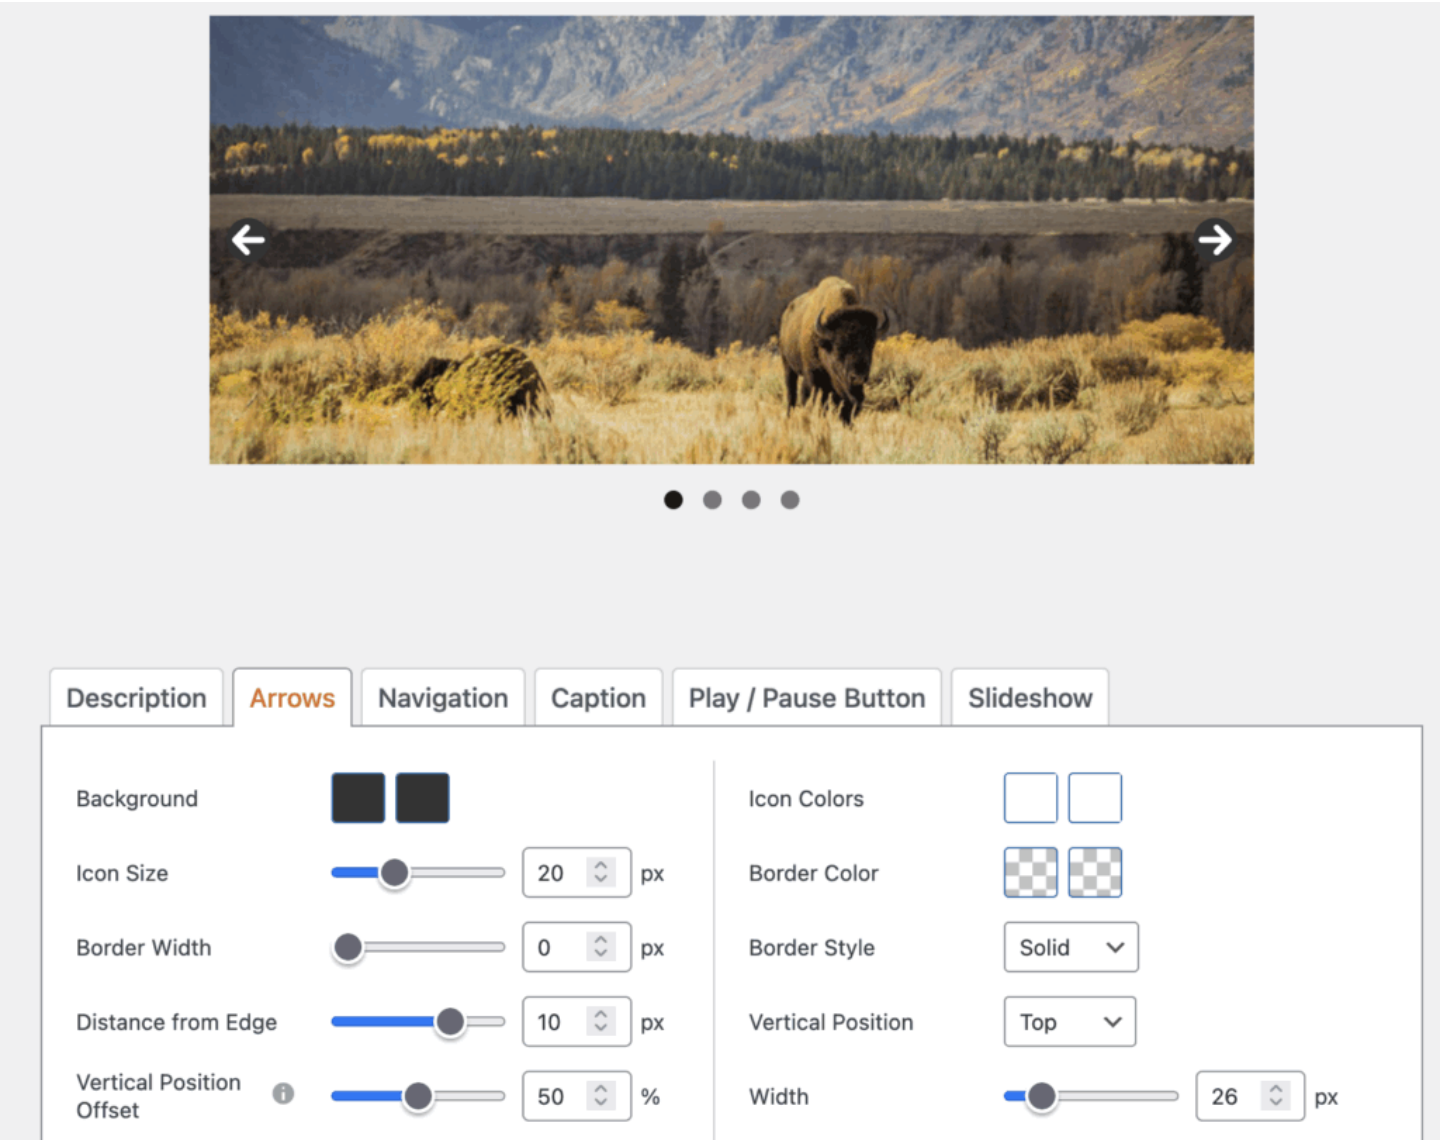

Go to the "Theme Editor" link in MetaSlider Pro. Click the "Add New" button.

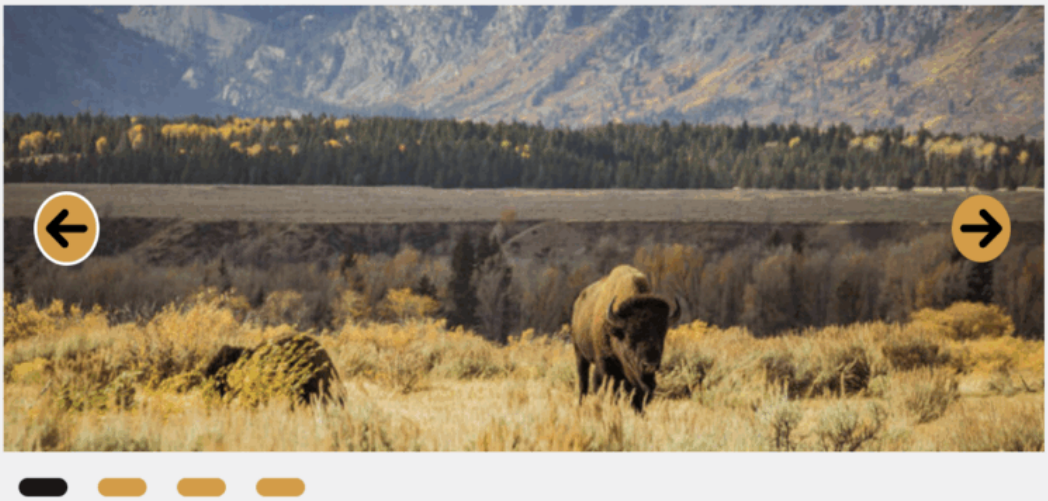

You can then choose to customize any theme available in MetaSlider:

Once you've selected a theme, you'll be taken to the main Theme Editor. This screenshot below shows the Theme Editor with a preview of the slideshow theme, and the settings underneath. Please note that the settings for each theme are slightly different. If you do not chose the "Base" theme, you may see slightly different options than in the screenshots below.

In this next screenshot I've modified the theme using an orange and black style. The arrows and navigation are now larger, in a different location, and use the new color scheme.

Description | Arrows | Navigation | Caption | Play / Pause Button | Slideshow
